NEWS RELEASE

October 27, 2004: Tyner Resources Ltd. (TSX: TIP) is pleased to announce that Foree International, LLC, as Operator, has signed a Memorandum of Understanding (“MOU”) with Geomechanik Wasser-und Umwelttechnik GmbH, a German drilling contractor, to initiate a three well drilling program on the 15,895 acre Czech coal bed methane project in which Tyner has a 70% working interest.

The program is scheduled to start during the week of November 8th, 2004, and coring of the first coal seams is anticipated to be conducted by the US Geological Survey (“USGS”) within 10 days of the start of the drilling. This will facilitate the initiation of the desorption and absorption tests which are expected to take 30 days to complete. Coring, absorption and desorption tests are critical to the assessment of reservoir evaluation of the project. Testing by the USGS on our behalf will provide credible independent verification of the project potential.

An immediate News Release will be disseminated upon drilling start-up to confirm the coring schedule.

ON BEHALF OF THE BOARD

Paul Larkin,
President
